Free PSA % (Free PSA, Total PSA),Serum

Date	07/Mar/2026 04:20PM	Unit	Bio Ref Interval
Prostate Specific Antigen CLIA	2.610	ng/mL	<4.00
Free PSA CLIA	0.630	ng/mL	
Free PSA % Calculated	24.14	%	

Ref Range % Free PSA is recommended in men with total PSA between 4-10 ng/ml.

Individual risk assisment

% Free PSA	Probability of Prostate Cancer
0-10 %	56 %
10.01-15 %	28 %
15.01-20 %	20 %
20.01-25 %	16 %
>25 %	8 %

- % Free PSA is recommended in men with Total PSA between 4-10 ng/ml.
- Free PSA is a valuable biomarker in the assessment of prostate cancer risk, particularly when used alongside "Total PSA levels".
- Free PSA interpretation involves assessing the ratio of Free PSA to Total PSA in the blood. A lower Free PSA percentage suggests a higher likelihood of Prostate cancer, while a higher percentage is more commonly seen in benign conditions like Benign Prostatic Hyperplasia (BPH).
- The concentration of "Free PSA" and "Total PSA" in a given specimen can vary when tested in two different labs due to difference in assays methods and reagent specification from different manufacturers.
- Hormone therapy can also show impact on Free PSA expression.
- Falsely elevate Free PSA levels can occur if testing is immediately done after procedures like a digital rectal exam, ejaculation, prostatic massage, ultrasonography or biopsy of prostate.

Result	No growth.
Interpretation.	Sterile after 2 days of aerobic incubation at 37 degree C.

Comment

Urine pus cells /HPF	Colony count	Interpretation
<5	10'3	Insignificant growth, more likely to be a colonizer. To be treated only if the patient is symptomatic
<5	10'4	Moderately significant growth. Should be correlated clinically and to be treated only if the patient is symptomatic
<5	10'5	Significant growth. Should be treated if the patient is clinically symptomatic
>5	10'3 / 10'4 / 10'5	Significant growth. Should be treated if the patient is clinically symptomatic
5 - 10	No growth	Kindly rule out the cause of sterile pyuria i.e Is the patient on antibiotics Or anyother systemic illness (e.g TB /STD)
>5	Mixed growth	Mixed growth of more than two types of organisms indicating specimen colonization. Kindly send mid-stream urine sample after proper collection.
